PROFESSIONAL SUMMARY

Third-year Computer Science (AI/ML) undergraduate with hands-on experience building end-to-end machine learning and full-stack applications, including a real-time computer vision system and a distributed, event-driven SaaS platform. Proficient in Python, SQL, and core ML/data libraries (Pandas, NumPy), with practical exposure to model development, API design, and version control. Active hackathon participant (JIS Tech Hackathon, Smart India Hackathon 2025) seeking an internship/entry-level role to apply AI/ML and software engineering skills to real-world problems.

TECHNICAL SKILLS

- **Programming & Querying:** Python, SQL
- **ML / Data Libraries:** Pandas, NumPy, scikit-learn (foundational), Machine Learning fundamentals
- **Computer Vision:** OpenCV, MediaPipe Face Mesh
- **Web & Backend:** Next.js, FastAPI, Flask
- **Tools & Platforms:** Git, GitHub, Vercel

PROJECTS

CareerAI Copilot — Unified Job Hunting Suite

career-ai-web.vercel.app

- Designed and built a distributed, event-driven SaaS platform that automates and streamlines the end-to-end job hunting pipeline, from job discovery to application tracking.
- Developed the frontend and user-profile system with Next.js, delivering a responsive web application for managing job search workflows.
- Built a high-throughput Python FastAPI microservice to perform parallelized web scraping of job listings, improving data collection speed and scalability.
- Architected the system as decoupled services to support asynchronous processing and future extensibility; documented the full system design in an architecture guide.

DrowsiGuard — AI Driver Drowsiness Detection System

[Live Demo](#)

- Built a real-time driver drowsiness detection system that uses a smartphone camera for video capture and a laptop for on-device processing, enabling low-cost deployment.
- Implemented facial landmark tracking with MediaPipe Face Mesh and OpenCV to monitor eye closure and head position as indicators of driver fatigue.
- Developed a Flask-based backend to stream and process live video frames and trigger real-time alerts, aimed at improving road safety.

EDUCATION

Supreme Knowledge Foundation Group of Institutions

B.Tech, Computer Science & Engineering (AI/ML) — 3rd Year (Expected 2027)

Techno India Group Public School

Higher Secondary (Class XII), Science

Dunlop English Medium School

Secondary (Class X)

CERTIFICATIONS

- Artificial Intelligence Course — IIT Hub Patna

ACHIEVEMENTS & EXTRACURRICULARS

- Participant, JIS Tech Hackathon — collaborated in a team to design and prototype a solution under time constraints.
- Participant, Smart India Hackathon (SIH) 2025 — national-level hackathon focused on solving real-world problem statements.
